Degree	Master of Science (Information Technology and Management)
Independent Study Advisor	Lecturer Dr.KemakornChaiprasit

ABSTRACT

The purpose of this study was to develop application support system for students and career guidance section of Rajamangala University of technology Lanna, Tak. The system was developed by using PHP script language to design and develop a user interface. MySQL program was used to manage the information system.

The developed information technology program consisted of four subsystems. 1) The basic information of application for administrator and the support students and career guidance section officers 2) A vacancy management system for the establishment 3) An application system and 4) The electronics resume system for student of Rajamangala University of technology Lanna, Tak.

The users of this system consist of three groups 1) two support students and career guidance section officers 2) twenty establishments and 3) fifty students of Rajamangala University of technology Lanna, Tak. The questionnaires were prepared to collect data from the users about their level of satisfaction in using the system. The result showed that the means of users was 4.16 at high level.
