

TABLE OF CONTENTS

Acknowledgement	iii
Abstract in English	v
Abstract in Thai	vii
Table of contents	ix
List of tables	xiii
List of figures	xv
List of map	xvi
CHAPTER 1: INTRODUCTION	1
CHAPTER 2: LITERATURE REVIEW	5
2.1. Sugarcane Root System, Formation and Pattern	5
2.2. Functions of Sugarcane Roots	6
2.3. Factors affecting on Sugarcane root growth and development	8
2.4. Water regimes in sugarcane	10
2.4.1 Water Requirement of Sugarcane	10
2.4.2 Effects of water stress or drought on sugarcane	11
2.4.3. Effects of excessive moisture or water lodging on sugarcane	13
2.5. Nitrogen nutrition in sugarcane	14
2.6. Nitrogen transformation in soil system	16
2.7. Nitrogen losses in the soils	18
2.7.1. Gaseous losses	18
2.7.2. Losses through Leaching	20
2.7.3. Losses through surface runoff water and soil erosion	20
2.7.4. Losses through Ammonium Fixation	20
2.8. Fertilizer use efficiencies	21
2.9. System, Simulation and Modeling in agriculture	23
2.10. Simulation, modeling in Agricultural research and Agro-technology transfer	24

CHAPTER 3: MATERIALS AND METHODS	26
3.1. Field survey	26
3.2. Field Experiment	28
3.2.1. Experimental site	28
3.2.2. Experimental design	28
3.2.3. Field management	28
3.2.4. Sampling procedures	29
3.2.4.1. Plants samples	29
3.2.4.2. Soil samples	31
3.2.4.3. Minimum data set for simulation using DSSAT v3	31
3.2.5. Data analysis	31
CHAPTER 4: RESULTS OF FIELD SURVEY	34
4.1. Physical environment of the area	34
4.1.1. Physical feature of the area	34
4.1.2. Climate	36
4.1.3. Soil	37
4.2. Land use in the area	38
4.3. Farm household, Farm size and energy resource of survey sites	39
4.5. Cropping system and cropping patterns	40
4.6. Economic aspect of sugarcane production in the area	42
4.7. Cultural practices in sugarcane cultivation	43
4.8. Nutrient and Fertilizer management in sugarcane cultivation	48
4.9. Productivity of sugarcane in the survey sites	50
4.10. Some constraints of cane growers	51
CHAPTER 5: RESULTS OF FIELD EXPERIMENT	53
5.1. Initial conditions of the field	53
5.2. The response of sugarcane root	54
5.2.1. Dry matter	54
5.2.2. Root length, root density, and its distribution pattern	57
5.4. The response of sugarcane above ground plant parts	61
5.4.1. Dry matter	61

5.4.2. Leaf area and number of tiller per hill	64
5.5. Total Nitrogen content in plant parts	66
5.6. Effect of nitrogen application and irrigation on soil pH and total nitrogen content in soil at observed stage	72
5.7. Efficiencies of nitrogen fertilization	73
CHAPTER 6: RESULTS OF SIMULATION	75
6.1. Minimum data sets for the model simulation	75
6.2. Model performance	76
6.3. Model evaluation	78
6.3.1. Biomass accumulation	78
6.3.2. Nitrogen concentration in root	82
6.3.2. Nitrogen concentration in leaf	86
CHAPTER 7: DISCUSSION	89
7.1. Climate and agroclimatic conditions of the study area for sugarcane crop	89
7.2. Soils' properties of sugarcane growing area	90
7.3. Cropping systems and patterns	92
7.4. Cultural practices in sugarcane cultivation	93
7.5. Nutrient and Fertilizer management system in sugarcane cultivation	96
7.6. Consideration on constraints of cane growers	97
7.7. Sugarcane response to nitrogen and water management systems	99
7.7.1. Root dry weight	99
7.7.2. Root Length, density and its distribution pattern	102
7.2.3. Number of tillers per hill and leaf area	104
7.2.4. Sugarcane above ground dry weight	105
7.2.5. Total Nitrogen content in plant parts	106
7.8. Effect of nitrogen application and irrigation on soil pH and residual total nitrogen content in soil at observed stage	109
7.9. Efficiencies of nitrogen fertilization at different water management systems, under given environmental circumstances	110
7.10. Applications of DSSAT-CANEGRO Model	111

CHAPTER 8: CONCLUSION AND RECOMMENDATION	113
8.1. Conclusion	113
8.2. Recommendation	115

LIST OF TABLES

Table	Page
1. The monthly climatic conditions of the study area, Pyay, Myanmar	36
2. Selected physical and chemical properties of soils from surveyed sites	38
3. Cultivated area of relative important crops (2000-2001)	39
4. Present conditions of household, farm size and some energy resources for crop production in each site as average	40
5. Farmers' perception on sugarcane crop	42
6. Gross-margins of major relative important crops in Area (2000-2001)	43
7. Farmers' cultural practices in new planted sugarcane	45
8. Farmers' other nutrient management in crop production	48
9. Chemical fertilizer application by cane growers	49
10. Type, Rate and Timing of fertilization in sugarcane cultivation	50
11. Sugarcane yields among surveyed sites	51
12. Some constraints of cane-growers in sugarcane production	52
13. Selected chemical and physical properties of the experiment-field, MCC Chiang Mai, 2002	53
14. Mean mortality percentage of transplanted plants at nitrogen applications under different water management systems	54
15. Analysis of variance for root dry weight (gm hill^{-1}) in observed soil volume (6000 cm^3) at observed stages	55
16. Analysis of variance for total root density (cm cm^{-3}) in soil volume (6000 cm^3)	58
17. Mean of root length (cm) at different soil layers responded to nitrogen applications under different water management systems	59
18. Analysis of variance for dry weight (gm hill^{-1}) of above ground plant parts	61
19. Analysis of variance for number of tiller hill^{-1} , and leaf area ($\text{m}^2 \text{ hill}^{-1}$) at observed stages	64

20. The analysis of variance for total nitrogen content (percentage) in sugarcane above ground parts	67
21. The analysis of variance for total nitrogen content (percentage) sugarcane roots	67
22. The effect of nitrogen application and irrigation on soil pH and total nitrogen content at observed stage (100 DAS)	72
23. Efficiencies of nitrogen applications under different water management systems	74
24. Simulated biomass yield (CWAD) at nitrogen application under different water management system (tonnes ha ⁻¹)	76
25. Simulated water stress (WSGD) status on crop growth at nitrogen application under different water management system	77
26. Simulated nitrogen stress status (NSTD) on crop growth at nitrogen application under different water management system	77
27. Simulated nitrogen concentration in root (RN%D) at nitrogen application under different water management system	78
28. Simulated nitrogen concentration in leaf (LN%D) at nitrogen application under different water management system	78
29. The results of statistical analysis for the comparison between the simulated biomass yield and observed biomass yields (tonnes ha ⁻¹)	79
30. The results of statistical analysis for the comparison between the simulated and observed nitrogen concentration in root (RN%D)	82
31. The results of statistical analysis for the comparison between the simulated and observed nitrogen concentration in leaf (LN%D)	86

LIST OF FIGURES

Figure	Page
1. Major cropping patterns in lowland (2000-2001)	41
2. Major cropping patterns in upland (2000-2001)	41
3. Sugarcane root dry weight (gm hill^{-1}) in observed soil volume response to nitrogen rates at different stages under different water systems	56
4. Dry matter accumulation of sugarcane root in observed soil volume over the observation period, at nitrogen applications under different water management systems (gm hill^{-1})	57
5. Distribution of root density at different observed soil layers responded to nitrogen rates under different water management systems	60
6. Sugarcane above ground dry weight (gm hill^{-1}) response to nitrogen rates at different stages under different water management systems	62
7. Dry matter accumulation of sugarcane above ground parts over the observation period, at nitrogen applications under different water management systems (gm hill^{-1})	63
8. Number of sugarcane tillers hill^{-1} at different nitrogen rates, under different water management systems	65
9. Leaf area ($\text{m}^2 \text{hill}^{-1}$) at different nitrogen rates, under different water management systems	66
10. Total nitrogen content in above ground parts (percentage) at nitrogen application under different water management systems	68
11. Total nitrogen content (percentage) in above ground parts over the observation period	69
12. Total nitrogen content (percentage) in roots over the observation period	70
13. Total nitrogen content in roots (percentage) at nitrogen application under different water management systems	71
14. Effect of Nitrogen application on soil pH under different water management systems	73

15. Total nitrogen content in 100 gm soil at 100 DAS under different water management systems	73
16. Comparison of simulated and observed biomass yields (tonnes ha ⁻¹) responding to nitrogen applications under irrigation system at different stage	80
17. Comparison of simulated and observed biomass yields (tonnes ha ⁻¹) responding to nitrogen applications under rainfed system at different stage	81
18. Comparison of simulated and observed nitrogen concentration (percentage) in root responding to nitrogen applications under irrigation system at different stages	84
19. Comparison of simulated and observed nitrogen concentration (percentage) in root responding to nitrogen applications under rainfed system at different stages	85
20. Comparison of simulated and observed nitrogen concentration in leaf (percentage) responding to nitrogen applications under irrigation system at different stages	87
21. Comparison of simulated and observed nitrogen concentration in leaf (percentage) responding to nitrogen applications under rainfed system at different stages	88

LIST OF MAP

1. Physical feature of Pyay Township with locations of surveyed sites	35
