ACKNOWLEDGEMENTS

I am deeply grateful to the Thailand Research Fund for giving me the opportunity to conduct a Ph.D with a Royal Golden Jubilee Ph.D Scholarship at Chiang Mai University, which enabled me to gain both knowledge and experience.

Special thanks to Prof. Dr. Benjavan Rerkasem, my advisor and chairperson of the thesis advisory committee who made significant contributions throughout the development of this thesis.

Sincere appreciation goes to other members of the advisory committee, Assoc. Prof. Dr. Richard W Bell, Assoc. Prof. Dr. Bernie Dell who have given valuable advice and criticisms for the success and readability of this book, and to Assoc. Prof. Dr. Sansanee Jamjod for her invaluable suggestions.

I thank Dr. Longbin Huang (Postdoctoral Fellow) for advice, staff of glasshouse and Trace Element Laboratory for technical support, and Gordon Thompson for assistance in the use of a UV-fluorescence microscope during a fifteen-month research at Murdoch University, Western Australia. Thanks also go to Dr. Pongmanee Thongbai and Ajarn Anand Isarasenee for their constructive comments and generous advice, and to all staff of Plant Nutrition Group at Chiang Mai University, especially Khun Sithichai Loadkaew for assisting in laboratory work.

Finally, I would like to thank my parents, my grandmother and my younger brother and sister for their understanding, sacrifices and for providing me with the inspiration and encouragement during this long process of my study.

Duangjai Nachiangmai
