

## TABLE OF CONTENTS

Acknowledgement	iii
Abstract (English)	iv
Abstract (Thai)	vii
Table of contents	x
List of tables	xiii
List of figures	xvi
<b>CHAPTER I INTRODUCTION</b>	<b>1</b>
1.1 Statement of the problem	1
1.2 Rationale	2
1.3 Objectives of study	2
1.4 Scope of this study	2
1.5 Literature review	3
1.5.1 Trend analysis	3
1.5.2 Risk aversion analysis	3
1.5.3 Risk programming analysis	5
<b>CHAPTER II RESEARCH METHODS</b>	<b>8</b>
2.1 Data collection	8
2.2 Data analysis	8
<b>CHAPTER III BIOPHYSICAL CONDITIONS AND AGRICULTURE</b>	
<b>PRODUCTION OF THE STUDY AREA</b>	<b>18</b>
3.1 Biophysical condition of Phayao province	18
3.1.1 Location and topography	18
3.1.2 Climate	18
3.1.3 Soil	21

3.1.4 Water supply	22
3.2 Socio-economic condition	23
3.2.1 Land use and land holding	23
3.2.2 Population and labor	25
3.2.3 Gross provincial product, expense, income, and debtness	27
3.3 Rice production system	31
3.3.1 Crop pattern	31
3.3.2 Rice marketing	34
3.3.3 Rice mortgage	36
3.3.4 Rice variety	38
RD16	38
KDML105	40
RD6	42
3.3.5 Rice production	46
Rice yield	46
Rice variable cost and gross margin	46
Labor use	47
<b>CHAPTER IV RESOURCE USE AND ACTIVITIES</b>	<b>50</b>
4.1 Analysis of MOTAD model	50
4.1.1 Context	50
4.1.2 Model formulation	50
4.1.3 Activities in model	51
4.2 Resource constraints	51
4.2.1 Land	51
4.2.2 Labor use	51
4.2.3 Financial capital supply	52
4.3 Coefficient of Inputs	52
4.3.1 Labor use	52
4.3.2 Cast cost	53
4.3.3 Gross margin under market price and government support price	53
4.3.4 Deviation of gross margin	54

4.3.5 Tested models	57
<b>CHAPTER V RISKS AND TREND ANALYSIS</b>	65
5.1 Risks and coefficient of variations	65
5.2 Trend analysis	70
<b>CHAPTER VI OPTIMAL FARM PLANS</b>	74
6.1 Optimal farm plan for rainfed area	75
6.1.1 Optimal farm plan for model A	75
6.1.2 Optimal farm plan for model B	79
6.2 Optimal farm plan for irrigated area	82
6.2.1 Optimal farm plan for model C	82
6.2.2 Optimal farm plan for model D	85
6.3 Optimal farm plan for a combination of market and government support price	88
6.3.1 Optimal farm plan for model E	88
6.3.2 Optimal farm plan for model F	92
6.4 Sensitivity Analysis	100
6.4.1 Optimal farm plan (Model A, B, C, D, E and F) at risk aversion of 0.9	100
6.4.2 Sensitivity analysis in prices	110
<b>CHAPTER VII conclusion and RECOMMENDATIONS</b>	116
7.1 Conclusions	116
7.2 Limitation of the study	118
7.3 Recommendations for further study	118
<b>REFERENCES</b>	119
<b>APPENDIX</b>	124

## LIST OF TABLE

<b>Table</b>	<b>Page</b>
2.1 MOTAD model for analysis to find optimal rice production in Phayao province under risk situation	14
3.1 Land use in Phayao province, 2001	23
3.2 Number of household with agricultural land holdings and area coverage, 2006	
Distance to Vietnam border	24
3.3 Number of population from registration record by district, 2004 – 2006	25
3.4 Status of labor in Phayao province, 2006	26
3.5 Labor supply in agriculture in Phayao province, 2001	26
3.6 Gross provincial product at current prices by industrial origin, Phayao province, 1999-2006	27
3.7 Age of household head, expense and income of households by socio-economic class, Phayao province, 2004	28
3.8 Cash revenue, expenses and net cash income of farmers in Phayao province, 2001	29
3.9 Average amount of debt per household with debt by source of borrowing and socio-economic class, 2006	30
3.10 Wet season rice area and rice yield in Phayao province: 1995 – 2006	33
3.11 Market price of rice, 1994-2007	35
3.12 Government support price, 2000-2007	37
3.13 Yield, cost, price, income and profit of RD15 rice in Phayao province	39
3.14 Yield, cost, price, income and profit of KDML105 rice in Phayao province	41
3.15 Yield, cost, price, income and profit of RD6 rice in Phayao province	43
3.16 Comparison property among RD15, KDML105, and RD6	45
3.17 Average rice yield for each rice variety	46
3.18 Variable costs of production of RD15, KDML105, and RD6 in rainfed and irrigated area in crop year 2005/2006	48
3.19 Labor use in each rice variety in crop year 2005/2006	49
4.1 Labor constraints	52
4.2 Cash costs for each rice variety	53

4.3	Gross margin for each rice variety	54
4.4	Deviation of revenue of rice varieties in Phayao province under market price from 2000/2001 – 2005/2006	56
4.5	Deviation of revenue of rice varieties in Phayao province under government support price from 2000/2001 – 2005/2006	57
4.6	MOTAD model in rainfed area with market price (Model A)	59
4.7	MOTAD model in rainfed area with government support price (Model B)	60
4.8	MOTAD model in irrigated area with market price (Model C)	61
4.9	MOTAD model in irrigated area with government support price (Model D)	62
4.10	MOTAD model in rainfed area with market price for RD15 and RD6 and government support price for KDML105 (Model E)	63
4.11	MOTAD model in irrigated area with market price for RD15 and RD6 and government support price for KDML105 (Model F)	64
5.1	Price and coefficient of variation of rice price	67
5.2	Yield and coefficient of variation of rice yield	67
5.3	Cost and coefficient of variation of rice cost	68
5.4	Gross margin and coefficient of variation for each rice variety, 2000/01 – 2005/06	69
5.5	Simple regression result using market price as dependent variable	70
5.6	Simple regression result using support price as dependent variable	71
5.7	Simple regression result using rice yield as dependent variable	71
5.8	Classification of level of price, yield, cost and gross margin risk in each rice variety	73
6.1	Relationship between risk aversion level ( $\Phi$ ) and probability of success	75
6.2	Optimal farm plan solutions for rainfed area by using market price (Model A) at risk aversion 0.9	77
6.3	Optimal farm plan solutions for rainfed area by using market price: Model A	78
6.4	Optimal farm plan solutions for rainfed area by using government support price (Model B) at risk aversion 0.9	80
6.5	Optimal farm plan solutions for rainfed area by using government support price: Model B	81

6.6	Optimal farm plan solutions for irrigated area by using market price (Model C) at risk aversion 0.9	83
6.7	Optimal farm plan solutions for irrigated area by using market price: Model C	84
6.8	Optimal farm plan solutions for irrigated area by using government support price (Model D) at risk aversion 0.9	86
6.9	Optimal farm plan solutions for irrigated area by using government support price: Model D	87
6.10	Optimal farm plan solutions for rainfed area by using market price and government support price (Model E) at risk aversion 0.9	90
6.11	Optimal farm plan solutions for rainfed area by using market price and government support price: Model E	91
6.12	Optimal farm plan solutions for irrigated area by using market price and government support price (Model F) at risk aversion 0.9	93
6.13	Optimal farm plan solutions for irrigated area by using market price and government support price: Model F	94
6.14	Reduced costs and ranges of coefficient in the objective function which the basis is unchanged	102
6.15	Reduced costs and ranges of coefficient of hired labor cost in the basis is unchanged	103
6.16	Dual price, slack and ranges in which the basis is unchanged	106
6.17	Dual price, slack and ranges of family labor over which the basis is unchanged	108
6.18	Market price and government support price of each rice variety in year 2010	110
6.19	Gross margin of each rice variety in year 2010	111
6.20	Summary of sensitivity models description	111
6.21	Optimal farm plan solution of price sensitivity models	113

## LIST OF FIGURE

<b>Figure</b>	<b>Page</b>
2.1 Farmer's risk aversions	17
3.1 Distribution of monthly average temperature in Phayao province, 2006	19
3.2 Map of Phayao Province	20
3.3 Distribution of monthly average rainfall in Phayao province: 2005-2006	21
3.4 Suitable rice area in Phayao	32
3.5 Pattern of wet season rice	33
3.6 Rice marketing channel	34
3.7 Market price of rice in Phayao, 1994/95-2007/08	36
3.8 Government support prices of rice in Phayao, 2000/01-2007/08	37
4.1 The framework for optimal farm plans	58
6.1 Expected gross margin in optimal farm plans	107
6.2 Total cost in optimal farm plans	107
6.3 Risk in optimal farm plans	108
6.4 Land allocation among Model A, Model B and Model E	110
6.5 Land allocation among Model C, Model D and Model F	110
6.6 Land allocation in optimal farm plans	127
