## ACKNOWLEDGEMENT

I wish to express my sincere gratitude and respect to my supervisor, Assoc. Prof. Dr. Arunee Apichartsrangkoon for giving me an opportunity to study the PhD degree, her enthusiastic guidance, and support during the Thesis's preparation. A special thanks goes to my co-supervisor, Asst. Prof. Dr. Ekachai Chukeatirote (Mae Fah Luang University) for his help and valuable suggestions from the beginning of the work (in which I at first felt it would never end). I also appreciate useful suggestions of Dr. Richard Frazier (The University of Reading), also my co-advisor, and for his help in isoflavone analysis. His generosity and assistance during my visit in UK are highly appreciated. I would extend my thanks to Dr. Ampin Kantiya and Prof. Saisamorn Lumyong for their guidance and corrections of my Thesis.

My study was sponsored by the Royal Golden Jubilee PhD Program, Thailand Research Fund. I would also like to acknowledge Pibulsongkram Rajabhat University for my study allowance. I am indebted to Prof. Don Mottram and Dr. Stephen Elmore (The University of Reading) for their help, support and introducing me into the world of volatile compound analysis. My special thanks to Dr. Piyanuch Niamsup (Maejo University) for analysis the 16S rRNA gene of *B. subtilis* TN51.

I also wish to express my special thanks to Ms. Auytin Chanmuang (Field Crop Research Center, Institute of Agriculture) for supplying the protein-rich soybean cultivars used in the study. I wish to thank Dr. Thawatchai and Dr. Piyawan Supavititpatana including Dr. Utaiwan Chattong for their kind advice and encouragement. Thanks are also given to Foon, Nachayuth, Wanpa, Oom, Tor, Dong and Mint for their help and friendship.

Warm thanks to my sisters, Poo, Rae, Praw and Poom for their love, care, support and encouragement. I cannot say "thank you" enough to my parents, who passed away for their love I will never forget through my life.

Katekan Dajanta
