## LIST OF TABLES

<b>TABLE</b>		<b>PAGE</b>
1	Characteristics of the participants	25
2	Comparisons between three surface conditions for gait parameters during walking on a treadmill	26
3	Comparison between three surface conditions for gait variability during walking on a treadmill	30
4	Changes of gait parameters and variability during up-and downslope walking in relation with level surface walking	33
5	The intra-class correlation coefficient of gait parameters	61

## LIST OF FIGURES

<b>FIGURE</b>		<b>PAGE</b>
1	Subdivision of normal gait cycle	6
2	A single gait cycle illustrates step and stride length	6
3	A typical video screens with an indication of the pixel coordinates	15
4	Two possible reference objects for two-dimensional video calibration	16
5	Comparison between each walking condition for step length	27
6	Comparison between each walking condition for toe clearance	28
7	Comparison between each walking condition for maximal sole inclination	29
8	Average stride length of all participants (n=15) over 200 strides for each surface condition	31
9	Average stride time of all participants (n=15) over 200 strides for each surface condition	32
