

TABLE OF CONTENTS

	Page
Acknowledgement	iii
Abstract in Thai	iv
Abstract in English	vi
List of Tables	ix
List of Figures	x
Chapter 1 Introduction	1
1.1 Motivation	1
1.2 Models For Human Resource Management	3
1.3 Conventional Optimization And Search Techniques	7
1.4 A Simple Genetic Algorithms (Gas)	11
1.5 Closure	25
Chapter 2 Problem Formulation And Proposed Solution Methodogy	26
2.1 Problem Formulation	26
2.2 Solution Methodology	46
Chapter 3 Numerical Examples	49
3.1 Dynamic Adjustment Of Age Distribution In Knowledge Worker Management	49
3.2 Optimal Long-Term Planning Of Knowledge Workers	62
3.3 Optimal Design Of Appointment System For Outpatient Service	69
3.4 Discussions	80
Chapter 4 Conclusions and Future Works	81
4.1 Conclusions	81
4.2 Future Works	82

LIST OF TABLES

Table		Page
1.1	Binary numbers and their corresponding decimal numbers.	17
3.1	Summation of the number of employees in each year for study case 1.	55
3.2	Summation of the number of employees in each year for study case 2.	57
3.3	Definition of random variables in the numerical example.	75
3.4	Threshold values in case of deterministic number of patients.	76

LIST OF FIGURES

Figure	Page
1.1 GAs search procedure.	15
1.2 Chromosome representation using binary coding for real values [Michalewicz 1996].	17
1.3 A binary-coded chromosome for real values.	17
1.4 Crossover of two chromosomes.	20
1.5 Mutation on a chromosome.	22
2.1 A part of an appointment system for a doctor.	39
2.2 An appointment system with multiple doctors, no-show patients, and patients	40
3.1 The present age distribution P_0 and the desired age distribution P_5 at 5 years.	52
3.2 Adjustment magnitudes obtained from GA for study case 1.	53
3.3 Age distribution at $NYear = 5$ for study case 1.	54
3.4 Evolution of age distribution for study case 1.	55
3.5 Adjustment magnitudes obtained from GA for study case 2.	56
3.6 Age distribution at $NYear = 5$ for study case 2.	56
3.7 Evolution of age distribution for study case 2.	57
3.8 Adjustment magnitudes obtained from GA for study case 3.	58
3.9 Age distribution at $NYear = 5$ for study case 3.	59
3.10 Evolution of age distribution for study case 3.	59
3.11 Histogram of absolute deviation for study case 1.	60
3.12 Histogram of absolute deviation for study case 2.	61
3.13 Histogram of absolute deviation for study case 3.	61
3.14 Demand of knowledge workers.	65
3.15 Costs for educating students at each respective academic-year.	66
3.16 Passing rate.	66
3.17 Resigning rate.	67
3.18 Retiring rate.	67
3.19 The upper bound of total budget available in each year.	68

LIST OF FIGURES (CONTINUED)

Figure	Page
3.20 The optimal number of the first academic-year students that can be supported.	68
3.21 The history of the average fitness of the feasible chromosomes in case of deterministic number of patients.	77
3.22 The distributions of chromosomes at various generations: (a) – Starting Generation, (b) – 20 th Generation, and (c) – 50 th Generation.	78
3.23 Verification of the optimal design from GA search in case of deterministic number of patients.	79
