ACKNOWLEDGEMENTS	iii
ABSTRACT	iv
LIST OF TABLES	ix
LIST OF ILLUSTRATIONS	x
CHAPTER I INTRODUCTION	1
Purposes of the study	2
Scope of the study	3
CHAPTER II LITERATURE REVIEW	4
Structure of enamel and effect of fluoride on its surface	4
Clinical feature of dental fluorosis	11
Histopathology of dental fluorosis	15
Acid etching	16
Etching pattern	18
Clinical Implication	24
CHAPTER III MATERIALS AND METHODS	25
Materials	25
Methods	36
- Fluoride concentration analysis	36
- Shear bond strength testing	40
Statistical Analyses	46

	Page
CHAPTER IV RESULTS	47
The fluoride concentration in each group of sample by means, standard deviations, and ranges	48
The comparison of the fluoride concentration in each group by analysis of variance and multiple comparison	49
The shear bond strength in each group of sample by means, standard deviations, and ranges	51
The comparison of the shear bond strength in each group by analysis of variance and multiple comparison	52
The correlations between the fluoride concentration and the shear bond strength	53
CHAPTER V DISCUSSION	55
Discussion of the results of the study	
- The Comparison of fluoride concentration of the three sample groups	56
- The shear bond strength of the three sample groups	57
- The correlations between the fluoride concentration and the shear bond strength	58
Discussion of the errors in the study	
- Error from the varieties of the samples	59
- Error from the method of fluoride concentration determination	59
- Error from the method of shear bond strength testing	60

	Page
- Error from the operator	61
Limitation of the research	62
Suggestions	62
CHAPTER VI CONCLUSION	63
REFERENCES	64
APPENDIX	68

LIST OF TABLES

Table	page
1. Fluorosis Index	13
2. Sample distribution in the three groups	25
3. Means, standard deviations and ranges of fluoride concentration in group 1 (non-fluorosis teeth), group 2 (very mild to mild fluorosis teeth) and group 3 (moderate to severe fluorosis teeth)	48
4. Analysis of Variance (ANOVA) results of the means fluoride concentration	49
5. Statistical comparison of means fluoride concentration using Duncan's multiple range test	50
6. Means, standard deviations and ranges of shear bond strength in group 1 (non-fluorosis teeth), group 2 (very mild to mild fluorosis teeth) and group 3 (moderate to severe fluorosis teeth)	51
7. Analysis of Variance (ANOVA) results of the means shear bond strength	52
8. Statistical comparison of means shear bond strength using Duncan's multiple range test	52
9. The data of fluoride concentrations (F^- conc.) in group 1 (non-fluorosis teeth), group 2 (very mild, mild fluorosis teeth) and group 3 (moderate, severe fluorosis teeth)	69
10. The data of shear bond strengths in group 1 (non-fluorosis teeth), group 2 (very mild, mild fluorosis teeth) and group 3 (moderate, severe fluorosis teeth)	70

LIST OF ILLUSTRATIONS

Figure	Page
1. Fine structure of enamel	
1 a Crystal orientation of three faces of a block of enamel, showing the rod structure	5
1 b-d Electron micrographs of three faces	5
2. Fluoride distribution across section of human molar enamel	8
3 a Fluoride distribution in the labial or buccal surface of three young anterior teeth	9
3 b Fluoride distribution in the labial or buccal surface of older anterior teeth	9
4. a-f showed degrees of dental fluorosis features according to Dean's classification system	14
4 a Score 0 (normal teeth)	14
4 b Score 0.5 (questionable)	14
4 c Score 1 (very mild)	14
4 d Score 2 (mild)	14
4 e Score 3 (moderate)	14
4 f Score 4 (severe)	14
5. Scanning electron micrographs of etching pattern in enamel	20
5 a Type I pattern	20
5 b Type II pattern	20
5 c Type III pattern	20
5 d Type IV pattern	20
5 e Type V pattern	20

	Page
6. Scanning electron micrographs of two fluorosis enamel surfaces from different teeth after etching with 40 % phosphoric acid gel for 60 seconds	23
6 a Type I fluorosis etching pattern	23
6 b Type II fluorosis etching pattern	23
7. Samples in group 1	26
8. Samples in group 2	26
9. Samples in group 3	27
10. Standard full metal (mesh-back) Edgewise premolar brackets	29
11. System 1 ⁺ adhesive	29
12. Standard fluoride solution	30
13. An commercial ionic strength-adjusting buffer (TISAB III)	30
14. 0.5 Molar perchloric acid solution (Analyzing grade)	31
15. Double distilled water (De-ionized water)	31
16. Incubator	33
17. 2-20 microliters "Socorex" type micropipette	33
18. Fluoride analyzing unit	34
19. Fluoride electrode	34
20 a Instron [®] universal testing machine	35
20 b Five kilonewtons load cell	35
21. Debonding plate	35
22. Mounting jig	36
23 a Upper and lower premolars	38
23 b Lingual surface of each tooth was used for fluoride determination	38
24 a An adhesive tape (No. 500, 3M Company) cover the middle third area of lingual surface of tooth	39

24 b	The micropipette with 10 microliters of 0.5 Molar perchloric acid was deposited on the exposed lingual surface of tooth	39
25.	Samples solution before fluoride determination	39
26 a	The tooth was sectioned the root from the crown	41
26 b	The enlarged pulp chamber to ensure the retention in acrylic resin block	41
27.	Tooth-bracket assemble by using the System 1 ⁺ adhesive	42
28.	The 0.018" x 0.022" stainless steel wire ligated to tooth bracket with an elastic ligature	42
29.	Tooth embedding in polyvinylchloride (PVC) block with blue-colored self cured acrylic resin	43
30.	Composition and position of instrument during the shear bond strength testing	44
31.	Position of debonding hook and tooth-bracket assemble in acrylic block ready for shear bond strength testing	45
32.	Schematic diagram of force direction for shear bond strength testing	45
33.	Scatter diagram between fluoride concentrations and shear bond strengths of all samples	54
