CHAPTER I	INTRODUCTION	1
	Principles, theories, rationales and hypotheses	1
	The objectives of the study	2
	The hypotheses	2
	Anticipated benefits	3
	Scope of the study	3
	Definitions	3
CHAPTER II	LITERATURE REVIEW	5
	Cephalometric study of class III malocclusion	5
	Dental arch study class III malocclusion	9
CHAPTER III	MATERIALS AND METHODS	11
	Materials	11
	Methods	13
	Statistical analyses	36
	Reliabilities of the measurements	37

CHAPTER IV RESULTS 38

Part 1: Means, standard deviations and two-way analysis of variance of the lateral cephalometric and the model measurements for both class III malocclusion and normal occlusion groups 39

Part 2: One way analysis of variance of the lateral cephalometric and the model measurements among groups categorized by type of occlusion and gender, following with the Scheffe' s multiple comparisons. 59

Part 3: One way analysis of variance of the lateral cephalometric and the model measurements among the skeletal normal overbite, skeletal deepbite and skeletal openbite in class III malocclusion group, following with the Scheffe' s multiple comparisons. 62

Part 4: The associations between type of occlusion and craniofacial measurements 67

CHAPTER V DISCUSSION 73

CHAPTER VI CONCLUSION 83

BIBLIOGRAPHY 86

APPENDIX A Reliabilities of the measurements 91

APPENDIX B Multiple logistic regression analyses for the associations between type of occlusion and the craniofacial measurements 93

LIST OF TABLES

Table		Page
3.1	The distribution of subjects by type of occlusion and gender	12
3.2	Age distribution of the normal occlusion and class III malocclusion groups	13
4.1	Two-way ANOVA of the lateral cephalometric measurements and their means and standard deviations by type of occlusion and gender	49
4.2	Two-way ANOVA of the model measurements and their means and standard deviations by type of occlusion and gender	53
4.3	One-way ANOVA and multiple comparisons for means of the lateral cephalometric measurements among the groups categorized by type of occlusion and gender	54
4.4	One-way ANOVA and multiple comparisons for means of the model measurements among the groups categorized by type of occlusion and gender	58
4.5	One-way ANOVA and multiple comparisons for means of the lateral cephalometric measurements among the skeletal normal overbite, deepbite and openbite in the class III malocclusion group	63
4.6	One-way ANOVA and multiple comparisons for means of the model measurements among the skeletal normal overbite, deepbite and openbite in the class III malocclusion group	65
4.7	The simple logistic regression analyses for the unadjusted associations between type of occlusion and craniofacial measurements	68

4.8 The multiple logistic regression analyses for the association between type of occlusion and craniofacial measurements sequentially adjusted for confounding factors 70

A.1 The Pearson's product moment correlations for the lateral cephalometric measurements and their significant values between the first and the second investigations 91

A.2 The Pearson's product moment correlations for the model measurements and their significant values between the first and the second investigations 92

B.1 Multiple logistic regression analyses for the associations between SNB and type of occlusion, controlling for each potential confounding factor 93

B.2 Multiple logistic regression analyses for the associations between ArGoGn and type of occlusion, controlling for each potential confounding factor 94

B.3 Multiple logistic regression analyses for the associations between SN and type of occlusion, controlling for each potential confounding factor 94

B.4 Multiple logistic regression analyses for the associations between SW and type of occlusion, controlling for each potential confounding factor 95

B.5 Multiple logistic regression analyses for the associations between SH and type of occlusion, controlling for each potential confounding factor 95

B.6 Multiple logistic regression analyses for the associations between UAFH and type of occlusion, controlling for each potential confounding factor 96

B.7 Multiple logistic regression analyses for the associations between LPFH and type of occlusion, controlling for each potential confounding factor 96

B.8 Multiple logistic regression analyses for the associations between U1-NA and type of occlusion, controlling for each potential confounding factor 97

B.9 Multiple logistic regression analyses for the associations between U1-SN and type of occlusion, controlling for each potential confounding factor 97

B.10 Multiple logistic regression analyses for the associations between L1-NB and type of occlusion, controlling for each potential confounding factor 98

B.11 Multiple logistic regression analyses for the associations between L1-GoGn and type of occlusion, controlling for each potential confounding factor 98

B.12 Multiple logistic regression analyses for the associations between L1-APg and type of occlusion, controlling for each potential confounding factor 99

B.13 Multiple logistic regression analyses for the associations between nasolabial angle and type of occlusion, controlling for each potential confounding factor 99

B.14 Multiple logistic regression analyses for the associations between H angle and type of occlusion, controlling for each potential confounding factor 100

B.15 Multiple logistic regression analyses for the associations between Upp. lip to E line and type of occlusion, controlling for each potential confounding factor 100
