	Page
ACKNOWLEDGEMENTS	iii
ABSTRACT (THAI)	v
ABSTRACT (ENGLISH)	vii
LIST OF TABLES	xi
LIST OF FIGURES	xiii
CHAPTER I INTRODUCTION	1
1.1 Rationale	1
1.2 Objectives	2
1.3 Hypothesis	2
CHAPTER II REVIEW OF THE LITERATURE	3
2.1 <i>MSX1</i> and its structure and functions	6
2.2 Tooth development	48
2.3 Hypodontia (Tooth agenesis)	56
2.4 Facial and palate development	59
2.5 Orofacial clefts	65
2.6 <i>Msx1</i> -associated human syndromic malformations	68

	Page
2.7 <i>Msx1</i> -associated human non-syndromic malformations	73
2.8 Previously reported <i>MSX1</i> mutations	75
CHAPTER III MATERIALS AND METHODS	78
3.1 Materials	78
3.1.1 Sample collection	78
3.1.2 PCR materials	79
3.2 Methods	80
3.2.1 Mutation analysis	80
3.2.2 Data analysis	83
CHAPTER IV RESULTS	85
CHAPTER V DISCUSSION	96
CHAPTER VI CONCLUSIONS	108
BIBLIOGRAPHY	109
APPENDICES	127
Appendix A List of patients in this study	128
Appendix B Coding sequence of <i>MSX1</i> (Exon 1 and 2)	132
Appendix C <i>MSX1</i> amino acid sequence	135
CURRICULUM VITAE	136

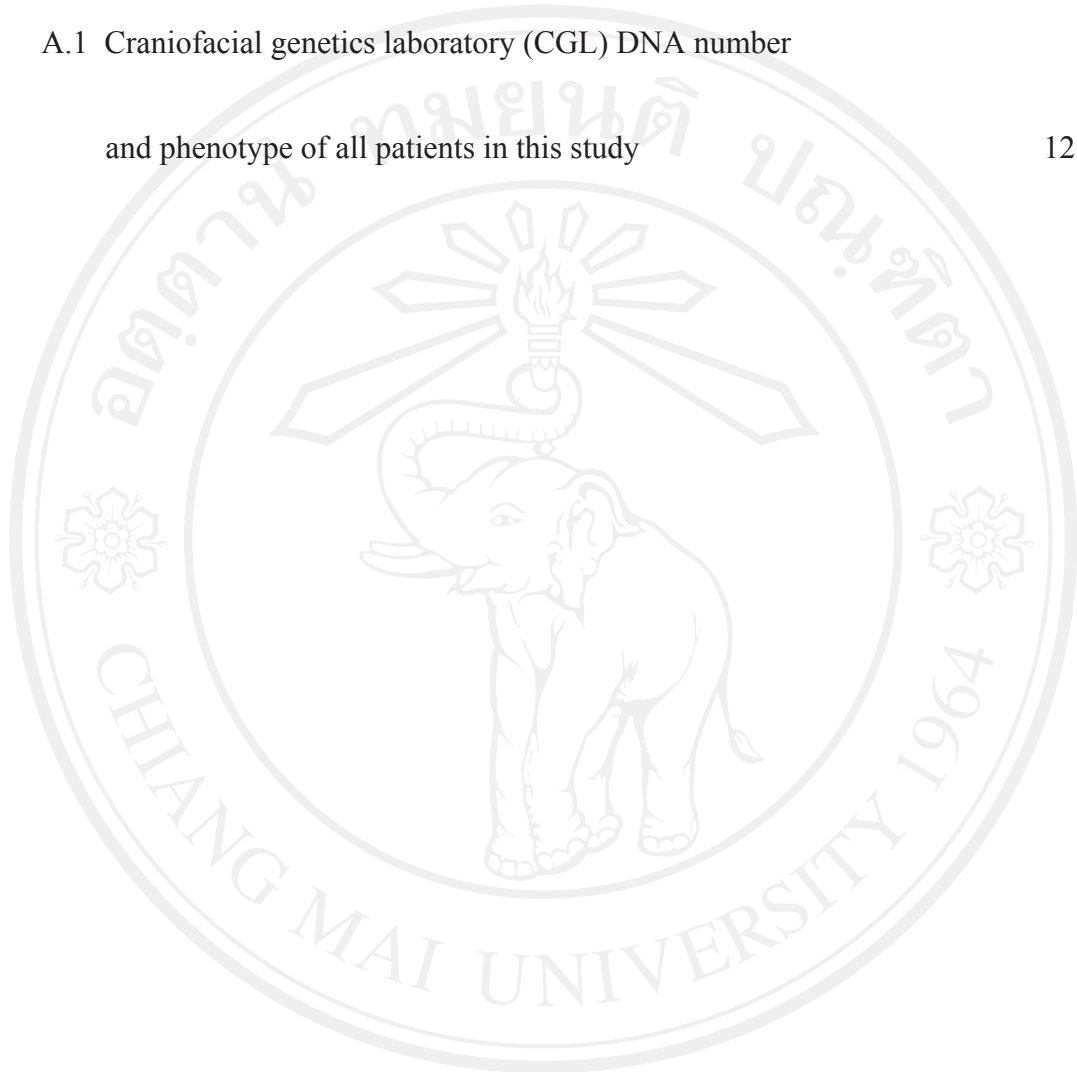

LIST OF TABLES

Table	Page
2.1 Animal species names	14
2.2 Candidate genes for non-syndromic cleft lip with or without cleft palate	67
2.3 Previous mutations of human <i>MSX1</i>	75
3.1 The phenotypes of patients with orofacial clefts in this study	79
3.2 The phenotypes of patients with hypodontia in this study	79
3.3 Oligonucleotides and polymerase chain reaction (PCR) conditions for <i>MSX1</i> mutation analysis	80
3.4 Reagents and concentration used in PCRs of exon 1	81
3.5 PCR conditions of exon 1	82
3.6 Reagents and concentration used in PCRs of exon 2	82
3.7 PCR conditions of exon 2	83
4.1 <i>MSX1</i> single nucleotide polymorphisms (SNPs) in this study	93

A.1 Craniofacial genetics laboratory (CGL) DNA number

and phenotype of all patients in this study

128

LIST OF FIGURES

Figure	Page
2.1 Structure of the <i>MSX1</i> gene	8
2.2 Seven Msx Homology (MH) domains	9
2.3 The amino acid sequences of the homeodomain and a C-terminal flanking region of the Msx1 protein	13
2.4 The mutations map to the conserved domains	15
2.5 The Msx1 homeodomain-DNA complex	16
2.6 MSX1 protein domains and amino acid sequences in each domain	17
2.7 Histone H1b and PIAS1 interact with Msx1 protein	18
2.8 Comparison of Msx and Dlx proteins	22
2.9 Odontogenesis in mice	24
2.10 Palates of wild type and mutant mice	25
2.11 Skeletal stain of the maxillary and palatine shelves of wild type and mutant mice	26

	Page
2.12 Palate development in wild type and mutant mice	26
2.13 Skeletal stain of the heads of wild type and mutant mice	27
2.14 Mandibles of wild type and mutant mice	28
2.15 Skulls of wild type and mutant mice	29
2.16 Bones of the middle ear of wild type and mutant mice	30
2.17 <i>Bmp4</i> and <i>Fgf8</i> signaling pathways	40
2.18 <i>Msx1</i> is expressed in the neural fold and works upstream of <i>Ednra</i>	41
2.19 <i>Endothelin-HAND-Msx1</i> pathway	42
2.20 Genetic pathway regulating <i>Ptc</i> expression in the early odontogenesis	43
2.21 Sumoylation of a target protein	46
2.22 Lysine residues (Lys9 and Lys127 of MSX1) that are covalently attached to SUMO	47
2.23 Stages of tooth development	49
2.24 Different gene expression in early tooth development	51
2.25 Molecular signaling in tooth development	52
2.26 <i>Msx1</i> , <i>Bmp4</i> and <i>Lef1</i> into a genetic pathway in early tooth formation	55

	Page
2.27 Frontal view of facial development during the 4 th week	59
2.28 Frontal view of facial development during the 5 th and 6 th week	60
2.29 Hard palate formation during the 6 th gestational week	61
2.30 Mandibular formation	61
2.31 Craniofacial development during the 7 th and 8 th week	62
2.32 Hard palate formation during the 7 th gestational week	62
2.33 Hard palate formation during the 8 th week	63
2.34 Hard palate formation at the end of the 8 th gestational week	63
2.35 Congenitally missing teeth in Witkop syndrome patient	69
2.36 Toenail dysplasia in Witkop syndrome patient	70
2.37 Wolf-Hirschhorn syndrome phenotypes	72
2.38 Schematic view of human <i>MSX1</i> mutations	76
3.1 Gel electrophoresis of exon 1 and exon 2	83
4.1 Pedigree of the family with p.P241S	86
4.2 Clinical and radiographic findings of proband I	87
4.3 Panoramic radiographs of the members of family I	87

	Page
4.4 Mutation analysis of proband I	88
4.5 Pedigree of the family with p.A197T	89
4.6 Clinical and radiographic findings of proband II	90
4.7 Panoramic radiographs of the members of family II	90
4.8 Mutation analysis of proband II	91
4.9 Sequence alignment of the Msx1 protein across various species	92
4.10 SNPs in coding regions compared with those in a normal sequence	94
4.11 Clinical findings of the patient with p.P147Q	95
5.1 Comparison of proline and serine structure models	98
5.2 Comparison of alanine and threonine structure models	101
5.3 p.A197T mutation in the helix II of the homeodomain	103
