## ACKNOWLEDGEMENTS

This work would not have been possible without the patient guidance of my two advisors whom I am deeply grateful. Firstly, Lect.Dr.Manoj Potapohn, he makes me fascinated in helped shape my approach to studying natural resource and environmental economics and substantially influenced this work, and he taught me that it is possible to be passionate about the environment and still be a careful economist. It's my first impression in his concern in natural resources and environment since the first class I attended as selective subject, of course, I intend to seize this opportunity since beginning to join this class which was started in the last semester. I learned from him that knowledge is not only in the text book but also in the valuable journals and available to be grasped during the research working with community and government. Secondly, Prof.Dr.Peter Hollis Calkins. I admired on his special technique of theoretically and naturally guidance, he has his own style of explaining and systematic thinking. I believe all of his students must love him. They both have always encouraged me to achieve my goals and helped me to get through tough times.

I'm especially thankful to Asst.Prof.Dr.Anchalee Jengjalean on her valuable comments and suggestions that help me to add more important information and better explanations. I am really glad that she accepted to be a chairperson of examining committee.

Additionally, I also would like to thank my informal advisors; Assoc.Prof.Dr. Songsak Sriboonchitta, Lect.Dr. Pathairat Pastpipatkul, and Dr. Chukiat Chaiboonsri (from Faculty of Economics, Chiang Mai University) for the many helpful suggestions on the Econometrics modeling and the use of Eviews program. Prof.Phongthep Wiwatthanadej (from Community Health–Faculty of Medicine, Chiang Mai University) who emphasized me on the impact from air pollution problem and agreed with me to continue working on this valuable study. Khun Peter Hoare (from Capacity Building in Biodiversity Project, Queen Sirikit Botanic Garden) who has guided me at the initial stage of my study, I have learned so much from his knowledge and experiences. Khun Thaveesak Jaikhumserp from Bank

of Thailand (Chiang Mai office) who shared me the information of smoke situation in upper northern Thailand from his research. And Pollution Control Department (PCD), who provided the data of air pollution concentration for this study, I realized on the great support through Khun Jintarat Rachiwong's assistance from Air Quality and Noise Management Bureau. Khun Patt Kanlayannamitr from Information Technology Service Center of Chiang Mai University (ITSC-CMU) who assisted me in transforming hourly data more than a thousand observations into mean daily data for accurately analysis in a short time. Officers from Faculty of Economics, Khun Golf and Khun Yam who helped organizing time frame and checking the format.

Last but not least, I would like to thank my mom and friends for their love and support. I am very fortunate to have such wonderful people. There are other people who have contributed to this work whom I cannot mention here, I would like to thanks to all of them.

Finally, any deficiencies in this study are my responsibility.

Thidarat Buadabthip
