## ACKNOWLEDGEMENT

There are many people whom I wish to thank for their help and support in completing this project. Firstly, I would like to thank my major advisor, Professor Dr. Nithiya Rattanapanone, for her helpful advice and quick response on my work. She never let me wait for the writing correction. Additionally, I would like to thank my co-advisor, Professor Dr. Bruce R. Harte who welcomed me to return to work at Michigan State University and Assistant Professor Dr. Pornchai Ratchtanapun, who always has helpful advice and encouragement. I also have to thanks Associate Professor Supasark Limpiti for being my examining committee, he gave many valuable comments throughout the seminar and I must sincerely thank Assistant Professor Dr. Rafael Auras for his useful suggestion through my work.

I must say thank you to the staffs at Postharvest Technology Institute and Faculty of Agro-Industry, Chiang Mai University who spent an incredible amount of time teaching me how to use the lab equipments and they were willing to serve me when I need something. They are truly professional staffs. Somkit Jaitrong was able to answer me every questions. I would also like to thank some of my friends at MSU, in particular Mr. Punkaj Kumar, Mr. Mahesh Kurana and Mr. Phitisilp Kijchavengkul, for their kind help while I was working there. They were more than willing to answer questions about everything. I am extremely grateful for them.

The financial support provided from the Thailand Research Fund through the Royal Golden Jubilee Ph.D. Program (Grant number PHD/0187/2004) is acknowledged.

I must also thank my parents for their love and support. They have been behind me in every endeavour that I have undertaken. I thank my husband for his love, patience, and support. It is doubtful that this project would have been completed at this time without his support. Finally, I cannot forget my lovely daughter who let me work and make me fresh when I am tired.

Jurmkwon Sangsuwan
